Boat Charter, Logistics and Training

Our background...

Seafari Marine Services Ltd (SMS) is an ISO 9001 accredited and Achilles FPAL registered company specialising in personnel and equipment transfers, safety and guard boat duties and logistical support to the emerging offshore renewables and offshore construction industries. We operate a modern fleet of ten metre Open and eleven metre Cabin RIBs no more than 3 years old using the latest Yamaha 300Hp outboard motors and electronics.

SMS Ltd has conducted a wide variety of tasks for many different companies on long and short term charter with the majority of contracts running simultaneously. These include a three year survey programme on the Sheringham Shoal Offshore Windfarm as well as our renewed four year contract with the Northern Lighthouse Board providing engineer transfers to remote locations around Argyll.

We also provide personnel and equipment transfers for major tidal and wave developers from EMEC at Orkney down to the North Coast of France. Our 11m Cabin RIBs provide an efficient, dry and safe method of transferring personnel and equipment onto devices, installation barges and tugs in a similar fashion to offshore windfarm transfers. Our unique front door cabin design and bow boarding platform enables passengers to simply exit the cabin and transfer over the bow in a safe and controlled manner.

Our skippers and crew...

have a tremendous amount of experience working in waters with strong tidal currents and unpredictable weather through our sister company Seafari Adventures Ltd, running wildlife trips to the Gulf of Corryvreckan, the world's third largest whirlpool area. The Seafari Group has been operational for sixteen years and is one of the largest, longest serving large RIB operators in the country.

Through our commercial RIB outfitting company Quinquari Marine North SMS Ltd is able to build new, versatile, bespoke vessels or modify our current fleet to any a clients specification. With our skippers often working with us in our workshops they have an excellent inside knowledge of the vessels and their construction, allowing them to deal with most situations themselves on site should any problems arise. Our ability to construct our own vessels enables us to utilise our experience gained working on offshore installations and to work with the ever changing industry, to design vessels to suit the needs of the many different future installations.

Our vessels...

are deployed complete with a launch and recovery trailer and mobile workshop allowing us to operate as a completely self sufficient unit, non reliant on any outside support. Spare engines are kept in our workshops in near Oban can be transported to any location within the UK and fitted within 24 hours. We can also call on 24 hour support from Quinquari Marine North, Humber RIBs and Yamaha UK.

The future...

SMS Ltd is committed to providing quality of service as well as being able to provide the safest, most suitable and modern support vessels operated by the most experienced crews to the emerging Tidal Industry. As well as our ISO 9001 accreditation and Achilles FPAL registration we will shortly be completing our BS 18001 and 14001 accreditations as well as becoming verified by Achilles UVDB. We believe that this commitment to quality, training and continuous investment in infrastructure will substantially reduce the risk factor for potential clients within the Offshore Renewables Industry.

Our new bespoke Multi Role Support Vessel, currently in the planning stage, is based on the success of our 11m Cabin RIB within the industry so far. Additions will include a W/C, a small galley and a larger fuel capacity along with MCA CAT 2 coding enabling the vessel to spend longer periods of time at sea. The vessel will also have an increased load carrying capacity. We have also redesigned our bow-loading platform to further ensure the safety of personnel transferring onto offshore structures and vessels.

Our aim...

as a company is to ensure that safe, dry, versatile and modern multi role support vessels, complete with a quality assured and comprehensive support infrastructure, are available to the Offshore, Renewables and Construction Industries as it shifts towards becoming fully commercial.
